<u>Module 8: Website Organization</u>

Things I already have on my course page are modules 1-6. Modules 1 & 2 are unordered lists and the rest are all ordered lists. Modules 4-6 also have ordered lists nested in them. I will be adding this module, along with modules 9-12. Out of all of the modules I only see module 9 needing a nested list underneath it.

When I reorganize my course page I feel that it would be best that most of my content is visible. That way when someone visits my site that they can see what's there. I thought about making dropdown lists, but I feel I don't have a whole lot of content to where that is necessary. I also don't like having some of the modules in unordered lists and the rest in ordered lists. I am going to change them all to unordered, because I like the way the bullets look rather than the numbers, however, I will keep the nested lists ordered.

For file names I plan on changing them to the module number and module title (ex; Module 1:Understanding Sequences), so when people visit my site they will know a bit about what they are clicking on rather than an anonymous module. I hope these changes optimize the utilization of my course page.
